Student Code of Conduct for the Use of Generative AI Tools in Academic Tasks

IIW, UHasselt & KU Leuven, 2026-2027

This form supports students and instructors in **transparent, responsible, ethical use** of Generative AI (GenAI) in academic tasks.

AS A STUDENT, YOU ARE REQUIRED TO …

- **carefully read** this Code of Conduct to understand which types of GenAI usage are permitted for the task and which guidelines apply;
- **indicate** whether any of the permitted types of usage were applied in preparing the submitted work and, if so, list the **GenAI tools used**;
- **keep a complete record of all interactions with GenAI tools** related to the submitted work and provide this record to the instructor upon request, but **only when the instructor has selected the option "Yes, if logged"**;
- **date and sign** this form to formally confirm the proper use of GenAI in preparing the submitted work, in accordance with this Code of Conduct;
- **attach** the signed form to the submitted work, which replaces the need to include detailed acknowledgments within the work or list GenAI tools in the reference list, unless specified otherwise by the instructor.

Course:	Augmented, Mixed and Virtual Reality (AMVR)
Instructor:	Davy Vanacken, Nick Michiels, Gustavo Rovelo Ruiz, Jan-Mathijs Pex, Vaibhav Mehra
Task(s):	Portfolio - Unity
Date or period:	2026-2027, semester 1

Type of usage of GenAI	**Allowed by instructor?**	**Guidelines for type of usage** **OR** **Explanation of why type of usage is not allowed for this task**	**Used by student?**	**Tools used by student**
Brainstorm about new ideas, possible approaches, etc.	☒ No ☐ Yes ☐ Yes, if logged ☐ Not applicable	Why not? This is an **important learning objective** in AMVR and should be done in your team. This can be tested during intermediate updates and/or defenses.	☒ No ☐ Yes	
As a **search tool** to find information on a topic	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	Beware that **reliability** of results cannot be guaranteed and that the ecological impact of GenAI is high. The student must always **verify** results against non-probabilistic sources of information.	☐ No ☒ Yes	ChatGPT
Assist in a **literature review**	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	Restricted to **searching** for and **processing** (analyzing, summarizing) literature. Students are expected to **gain their own insights** from literature and must **write the literature review themselves**. Always **cross-verify**, as GenAI may hallucinate or misinterpret sources, data or insights.	☒ No ☐ Yes	
Minor edits (spelling, grammar, punctuation, formatting) of **self-created** content (e.g., text, slides, data, code)	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	The original content must be **created by the student**. Use of GenAI is restricted to minor edits, which the student must **verify**, as GenAI makes mistakes.	☒ No ☐ Yes	
Significant edits or **refactoring** impacting structure, clarity or style of **self-created** content (e.g., text, slides, data, code)	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	The original content must be **created by the student**. The student must **critically evaluate** suggestions, **verify** all edits and ensure that edits **do not go beyond** or **alter the meaning or approach** of the original content.	☒ No ☐ Yes	
Generate **visuals** (e.g., diagrams, graphs or other data visualizations, design mockups, sketches, videos, animations)	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	The actual content and decisions (e.g., design ideas, appropriate visualization, the script) must **originate from the student**. The student must **review** the visuals and ensure their **originality** (not infringing on copyrighted or proprietary material) and **truthful representation** of the underlying reality, if applicable. Especially relevant for AMVR **demo videos**, which cannot be generated or altered to misrepresent your work!	☒ No ☐ Yes	
Generate fragments of **boilerplate code** (e.g., scripts to parse files, process and analyze data, perform basic calculations)	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	The student must **verify**, **understand** and be able to **explain** any submitted code, including underlying decisions. Beware that GenAI may generate incorrect, buggy or suboptimal solutions. **Core aspects** of AMVR portfolio tasks	☐ No ☒ Yes	ChatGPT/ Claude

		are **never** considered boilerplate: if you are unsure whether something qualifies, please consult the teaching team!		
Translate written content or **transcribe** oral content (e.g., interviews)	☐ No ☐ Yes ☐ Yes, if logged ☒ Not applicable	The student must **review** all output for accuracy, tone, and context, and must obtain **consent** before transcribing any oral content.	☒ No ☐ Yes	
Ask for feedback on your work	☐ No ☒ Yes ☐ Yes, if logged ☐ Not applicable	The student must **critically reflect** on the feedback before processing it in accordance with the permitted types of GenAI usage. Beware that GenAI may produce feedback that does **not align with the task's guidelines**.	☒ No ☐ Yes	
Generate entire solutions or **blocks of content** (e.g., full paragraphs of text or complete calculations, algorithms or designs that are a subject of evaluation)	**NOT ALLOWED**	The exam regulations state that, in evaluating the student's work, the instructor must be able to correctly assess the student's **own knowledge, understanding and skills**.	Not applicable	Not applicable

I hereby confirm that:

- I did not use GenAI assistance related to data or subjects under a Non-Disclosure Agreement, copyrighted or proprietary material, or sensitive or personal data due to privacy reasons. I obtained **permission** from the instructor, supervisor or external party to input given data into a GenAI tool.
- The submitted work **reflects my own knowledge, understanding and skills**. I am aware that the instructor may double-check my knowledge, understanding and skills in a format that excludes GenAI use.
- I understand that if I do not comply with this code on the use of GenAI, this may be considered an **irregularity** under the education, examination and legal positions regulations (EELR). In such cases, an irregularities procedure may be initiated (art. 18.1-18.3 EELR), which can lead to **sanctions** such as a modified grade.
- I adopted a **critical and scientific attitude** when interacting with GenAI. I am aware of GenAI's tendencies to **hallucinate, mislead, please, exhibit biases, etc.** and that GenAI can generate results that do not adhere to the task's guidelines.
- I am aware that I always bear **full responsibility** for the content of the work I submit. Possible errors or mistakes cannot be attributed to the GenAI tools used.
- I am aware that more information on the **usage of GenAI** can be found on the UHasselt and KU Leuven pages.
- I will always **consult with the course instructor** in case of doubt. GenAI tools evolve rapidly and new possibilities may entail novel forms of regulatory uncertainty that are best addressed openly and transparently.
